Ensure your infrastructure is Well-Architected for the cloud and aligns with industry best practices

AWS Well-Architected Review Program

Ensure your infrastructure is Well-Architected for the cloud and aligns with industry best practices

AWS developed the Well-Architected Framework based on years of experience helping clients design architectures on AWS across a variety of industry verticals and use cases.
The Well-Architected Framework is a set of best practices and strategies that continue to evolve for architecting systems in the cloud. As an AWS Advanced Consulting Partner, Anexinet is an approved Well-Architected Framework Review partner.

What is a Well-Architected Review?

The Well-Architected Review is a consistent and thorough process of identifying gaps in an architecture when compared to the AWS Well-Architected Framework. During a Well-Architected Review, Anexinet's AWS Certified Solution Architects guide you through the Well-Architected Framework to evaluate one of your workloads through a set of interactive discussions and data collection. The process looks at business and technical issues and should include stakeholders from both areas.

During the discussion, you'll receive immediate feedback on issues of major concern, such as unused resources or resources that not adequately protected. Following the review, you will receive a written reporting detailing our findings across each pillar along with a set of recommendations for remediation. Findings will be prioritized based on risk, cost savings, along with effort and cost to remediate.

The Five Pillars of the AWS Well-Architected Framework

Operational Excellence	Security	Reliability	Performance Efficiency	Cost Optimization

Benefits of A Well-Architected Review:

- Build and Deploy Faster.

- Lower or Mitigate Risks.

- Make Better Informed Decisions.

- Gain Visibility To Costs and Performance Trade-offs.

How It Works

Schedule a Date and Time For an Onsite Review

- Assume a maximum of a four-hour block.

Invite Your Key Stakeholders

- Business leaders and technical leaders (Not all four hours).

Review Day

- Your Anexinet Solution Architect will arrive 15 minutes early to setup for the session.
- The review will be an interactive discussion regarding a critical workload, covering 44 well-architected topics around the five pillars of the framework.
- The SA will need read-only access to your AWS environment for additional investigation.

What You Get

- Immediate feedback on major issues of concern.
- Within 3 days, a findings and recommendations report showing how your architecture compares with each of the five pillars of the Well-Architected Framework.
- A prioritized list of remediations around each pillar based on risk and effort involved.
- An estimate of the costs should you decide to have Anexinet assist with the remediation.

Bonus!

- As an authorized Well-Architected Review partner, AWS provides an incentive worth up to $5,000 in AWS credit, per workload review, if remediation work begins within 30 days of the review.
