

Make your business processes more efficient, faster, and accurate through automation

Tap into the power of business process automation (BPA) and robotic process automation (RPA) to automate both customer facing and back-end workflows that are traditionally manual, error-prone, or steal precious time from key resources.

Why consider business process automation?

From manufacturing to healthcare, organizations in every industry are taking advantage of automation to improve both efficiency and productivity throughout their organizations.

While robotic process automation (RPA) can be used to complete rules-based tasks typically performed by humans, business process automation (BPA) can completely automate customer facing and back-end workflows across your organization – enabling you to:

- Simplify and standardize complex functions
- Reduce the risk of human error
- Make decisions based on facts
- Improve customer experience
- Maintain compliance standards
- Free-up key resources
- Accelerate digital transformation
- And *so much* more

Any organization that follows a process can benefit from BPA – and because automation software can be incorporated in almost any area, the possibilities are truly endless!

Anexinet makes business process automation achievable

Along with simplifying and standardizing complex functions in your organization, our patent pending automation solutions and services can make them faster and far more accurate. Leveraging the framework of best-in-class RPA products from Automation Anywhere and our other partners, our automation team will create the underlying code to deliver the business outcomes you're striving for – whether that's lowering operational costs, maintaining compliance, or freeing-up key resources.

We have deep expertise across both customer facing and back-end workflows, with automation and orchestration capabilities that include:

Back and front-office tasks

Automated data and analytics

HR and accounting processes

Help desk support

Intelligent marketing

CRM and ERP integrations

Why Anexinet for business process automation?

We have extensive expertise and provide guidance on how your organization should utilize automation.

End-to-end automation capabilities and services – all guided by a proven process that's tailored to your business

A pioneer in RPA, ERPA, and the intelligent technologies that make business process automation possible and achievable

Patent pending automation software processes that are trusted by some of the world's largest companies and contact centers

Experience in the financial, insurance, healthcare, legal, life science, and many other regulated and B2B/B2C industries

Anexinet offers end-to-end Automation Services

At Anexinet, we offer a broad range of automation capabilities that extend well beyond customer facing and back-end processes, as well as end-to-end services from strategy through implementation and on-going managed support. With our help, you can leverage the power and potential of automation to drive repeatable, predictable outcomes across both IT and the business.

Our team has decades of experience in BPA and RPA

BPA and RPA are the next steps in the digital transformation of traditional business processes that organizations like yours perform on a daily basis.

Advancements in AI, software robots, and software-defined everything are accelerating the business demand for a variety of automation scenarios – and with our solutions and expertise, we can help you take advantage of them to save your customers time, accelerate the completion of employee tasks, and avoid both costly mistakes and delays.

Case Study: Automating the process of data extraction, processing, and reporting

Our client – a leading asset management and research company – needed to reduce the amount of time that their resources were spending on collecting and processing data, as well as expedite the delivery of investment performance reports to their clients and research teams.

Leveraging RPA from Automation Anywhere and additional capabilities provided by Python, we developed a solution that completely automated data processing and reporting from multiple sources of investment data. In addition to freeing-up key resources by reducing manual effort, our solution enabled them to:

Automate the delivery of reports via email

Significantly reduce the time spent on generating reports

Increase the availability of data to their clients and research teams

Improve operational efficiency across their business
